ABOUT ALERA MED

**Empowering Lives through Innovative
Science and Compassionate Care.**

ABOUT US

Where Innovation meets Compassion

The diagnosis of an autoimmune disease is not a resolution for your future, now you can rewrite your health story.

Welcome to Alera Med, where the fusion of innovation and empathy collaborates to empower you in reshaping your health narrative. The team, comprising medical experts and scientists, is dedicated to revolutionizing the way we approach chronic illnesses. We draw inspiration from the model that combines wisdom and creativity, fueling our unwavering determination to break new ground in the realm of healthcare.

OUR VISION

Empowering Individuals

Within Alera Med, the vision encompasses a future in which chronic conditions such as Crohn's, diabetes, arthritis, and multiple sclerosis cease to dominate one's existence.

Our unwavering commitment lies in empowering individuals through cutting-edge, scientifically supported treatments, serving as a guiding light of optimism along their path to well-being.

OUR APPROACH

Unique

Alera Med takes a distinctive approach by merging unconventional therapies with meticulous scientific investigation. We are firm believers in a future where the effective management of chronic diseases is attainable, and our relentless pursuit of innovation propels us toward that vision.

Our approach is non-invasive, pain-free and without unwanted side effects. We combine the latest scientific findings with a customized medical solution, based on personalized medicine.

OUR TEAM

Dedicated and Passionate Experts

Guided by a team of dedicated doctors and passionate scientists, we set the pace through our expertise and a shared commitment to reshaping health narratives. Your well-being is our paramount focus, and we are here to deliver the highest quality of care.

Therapy

IMAGINE THE HUMAN BODY AS AN ORCHESTRA, WHOSE MUSIC IS BALANCED ONLY WHEN THE SINGLE INSTRUMENTS ARE WELL-BALANCED. IN THE SAME WAY, IMBALANCES IN ESSENTIAL PROTEINS CAN DISRUPT THE BODY'S HARMONY, LIKE AN ORCHESTRA PLAYING OUT OF TUNE.

ALERA MED'S PROTEOME THERAPY AIMS TO BRING BACK THE SYMPHONY OF MOLECULAR INTERACTIONS FOR IMPROVED WELL-BEING.

Success Rate of Alera Med's Proteome Therapy

At Alera Med, thanks to the application of the latest non-invasive and advanced treatment methods, offering a personalized approach, remarkably high success rates have been reached so far.

*The success rate % includes patients in remission and stabilization of the disease.

A person is shown from the waist up, holding their lower back with both hands, suggesting pain or discomfort. They are wearing blue jeans. The image has a semi-transparent dark purple overlay. The text "INFLAMMATORY BOWEL DISEASES" is written in white, bold, uppercase letters across the center of the image.

INFLAMMATORY BOWEL DISEASES

Inflammatory bowel diseases

Inflammatory bowel diseases (IBD), including Crohn's disease and ulcerative colitis, affect millions worldwide, leading to unpredictable flare-ups and complications, impacting both physical and psychological well-being. IBD can result in significant reductions in the quality of life and elevate the risk of complications such as colorectal cancer.

Effective management of Inflammatory Bowel Diseases (IBD) involves addressing their underlying causes, tackling the multifaceted challenges they present, and considering holistic approaches alongside conventional treatments to mitigate side effects and improve outcomes.

Proteome Therapy

[Alera's Proteome Therapy](#) aims to revolutionize IBD care by restoring the intricate balance of the immune system in a personalized, non-invasive manner, tailored to each patient's unique immune system, minimizing side effects for favorable outcomes.

Alera Med is committed to a holistic precision medicine approach for IBD patients, utilizing small blood samples to quantify essential signaling proteins. These samples are analyzed to create a comprehensive medical-scientific dossier that guides tailored recommendations and informs proteome therapy interventions, recognizing the intricate network of interactions in sustaining overall well-being.

We are advancing personalized nanobiology and serology by producing tailored capsules and injectable serums, aiming to restore harmony within the complex molecular landscape and improve the lives of IBD patients.

A close-up photograph of a person's hand being tested for blood sugar. A hand is holding a white glucometer against the person's finger. Another hand is visible, possibly assisting with the test. In the foreground, several yellow insulin vials are visible, slightly out of focus. The background is a warm, orange-toned surface. The text "TYPE 1 DIABETES" is overlaid in white, bold, capital letters.

TYPE 1 DIABETES

Type 1 Diabetes

Type 1 diabetes is a life-threatening autoimmune disease affecting millions worldwide, including children. It results from the immune system attacking insulin-producing cells, leading to a lifetime of insulin injections and careful management. Proteome Therapy offers a promising innovation to address the root cause of the disease.

Proteome Therapy

Proteome Therapy offers a groundbreaking, individualized solution for Type 1 Diabetes by addressing the intricate challenges of regulating the immune system, aiming to restore equilibrium and recognizing the uniqueness of each patient's immune system for successful results.

Alera Med takes a holistic approach to precision medicine, utilizing advanced biomolecular testing to quantify proteins and identify molecular irregularities, which guides specialized recommendations for Proteome Therapy intervention.

We create personalized nanobiological and serological strategies to restore molecular balance, promoting individualized recovery.

A photograph of a person with their hand covering their face, suggesting distress or pain. The image is overlaid with a semi-transparent purple gradient. The text "MULTIPLE SCLEROSIS" is centered in white, bold, uppercase letters.

MULTIPLE SCLEROSIS

Multiple sclerosis

Multiple sclerosis (MS) is a global concern with unpredictable outcomes despite current treatments, stemming from autoimmune damage to the central nervous system's protective covering. While progress has been made, there's no definitive cure due to its unclear cause, making an integrative and personalized therapeutic approach essential, recognizing unique molecular alterations in each patient.

Proteome Therapy

Multiple Sclerosis (MS) presents a diverse range of symptoms, making a one-size-fits-all treatment ineffective. That's why [Alera's Proteome Therapy](#) offers a personalized approach by customizing therapy based on individual protein profiles to restore the balance of molecular interactions and improve overall well-being in MS patients.

Alera's innovative approach starts with a blood sample to identify potential molecular irregularities, leading to personalized recommendations and the development of tailored nanobiological and serological solutions that aim to restore balance in the immune system, minimize side effects, and improve overall well-being for MS patients. This unconventional approach seeks to achieve a balanced body by addressing the root causes of multiple sclerosis.

A person wearing a white lab coat is shown from the chest down, with their hands clasped together in front of them. The image is overlaid with a semi-transparent teal gradient. The word "ARTHRITIS" is written in white, bold, uppercase letters across the center of the image, positioned over the hands.

ARTHRITIS

Arthritis

Arthritis, a leading cause of disability, affects people of all ages and has limited success with current pharmaceutical treatments. Shifting focus to a holistic approach is necessary to address potential underlying causes and improve the lives of those affected.

Proteome Therapy

Proteome Therapy offers a groundbreaking approach to arthritis treatment by recognizing the individual molecular variations in patients, highlighting the importance of personalized medicine for therapeutic success.

[Alera's Proteome Therapy](#) aims to restore health in arthritis patients by addressing individual protein profiles, recognizing that imbalances in essential proteins can disrupt the body's harmony, similar to a musician playing out of tune in an orchestra. This therapy seeks to bring back the symphony of molecular interactions for improved well-being.

Alera uses blood samples to analyze key proteins, guiding specialized recommendations and developing personalized nanobiological and serological solutions for individualized recovery.
